1. Introduction
Introduction

The introduction of a scientific or technical document typically begins with a statement of the problem or question that will be addressed. The introduction of this document starts with the words: "It is generally accepted that the..." followed by a brief explanation of the purpose of the study or research. The introduction may also include a review of existing literature, highlighting the gaps in the current knowledge or the need for new research. The introduction sets the stage for the rest of the document, guiding the reader through the methodology, results, and conclusions.
Introduction
Introduction

"I have never been more convinced of the need for a deep understanding of the history of science, and of the profound influence of the history of ideas on our understanding of the world. The way in which the history of science is taught in schools and universities is crucial to our understanding of the world, and to our ability to make informed decisions about the future."
