Lecturecast

Lecturecast is UCL's automated lecture capture system.

Students both at UCL and elsewhere, have reported a range of benefits of using an automated lecture capture system, including:

- The ability to revisit complex material to ensure understanding
- The opportunity to clarify the use of unusual terminology or subject jargon
- The option to view lectures missed due to illness or unforeseen circumstances
- The ability to bookmark specific parts of recordings as an aid to revision

Lecture recordings are captured in Lecturecast enabled teaching spaces at the discretion of your Department and Lecturer/Tutor.

If your lecture is recorded you will be able to watch it back after the event, via your Moodle course once the content is released by the Course Administrator/Tutor.

You will be able to watch recordings via your Moodle courses once the content has been released by the Course Administrator/Tutor.

For instructions on how to access and view recordings refer to the Student Guide - Learning the Basics

Also refer to the Policy and Good Practice Guidelines and FAQs for additional information.

Example Lecturecast Capture

Depending on what is captured as part of the Lecturecast recording you can:

1. View the video recording
2. View the lecture slides associated with the class.
3. Use the player controls which includes standard play/pause, fast forward, and rewind buttons.
4. Use the interactive features to take notes, post questions and engage in discussions, bookmark and flag content.
